## PROFESSIONAL PROFILE

Software Developer with professional level B2 English; proficiency, extensive experience in both Back End and Front End development, focusing on languages such as Angular, ReactJS, NodeJS, among others; adept in relational and non-relational databases, experienced with agile methodologies and GIT usage. Actively seeking growth opportunities, aiming to expand knowledge and aspiring to lead development teams for innovative projects.

## WORK EXPERIENCE

**Globant**, Bogota

**February 2021 – Present**

*Implementation of cutting-edge digital solutions.*

### **Senior Web UI Developer**

Development and support of platforms at Kargo Inc. that enhance the online advertisement process using technologies such as AngularJS, Angular 8+, ReactJS, and NodeJS.

#### **Functions:**

- Propose and implement enhancements for existing and future applications.
- Engage in the technical planning of new features.
- Develop everything from database tables and API services to UI components for new functions.
- Review and approve code contributions from other team members.
- Conduct testing and technical interviews for new team members.

#### **Achievements:**

- I was the top choice for cross-team transitions, resulting in a 15% reduction in feature development time. My ability to adapt and contribute to different development contexts was crucial in maintaining operational flexibility and achieving objectives on each project.
- I took on a conflicted project, lacking a development team and documentation in unfamiliar languages. Through my own efforts, I successfully delivered the project, reducing the estimated time by 25%.
- I optimized communication between development and planning teams by establishing a direct link with designers and product professionals. Previously, multiple conversations were required to approve changes, but my approach reduced this need, streamlining the process by 30%, enabling faster implementations, and enhancing project execution efficiency.

**Sostereo**, Bogota

**November 2018 - February 2021**

*Music search platform and service.*

### **Front End Developer**

Development and support of the SoStereo website, a platform built on AngularJS and Angular 6+ that simplifies music discovery for various purposes.

#### ***Functions:***

- Continuous enhancement of core platform modules, including a smart search engine and embedded music player.
- Active involvement in technical discussions regarding new UI features.
- Ongoing communication with platform users, gathering feedback and proposing improvements.

#### ***Achievements:***

- Transformed the AngularJS application into a versatile hybrid app using Angular 4 upon joining the project, subsequently upgrading to Angular 8 while completely phasing out the legacy AngularJS base.
- Optimized MP3 file storage and streaming using AWS S3 lambda expressions, significantly improving system efficiency.
- Designed and implemented a comprehensive metrics system for artists, encompassing their global audience on Spotify, Apple Music, Deezer, and social media, with a focus on influential genres and countries.

**Banlinea**, Bogota

**February 2018 - October 2018**

*A banking-focused startup.*

### **Front End Developer**

Development of a simplified social network using Angular 5 for Experian - DataCredito.

#### ***Functions:***

- Learn and master Angular 5 to construct web applications.
- Develop and upkeep components and functionalities in Angular 5.
- Collaborate effectively within development teams and communicate technical ideas.

#### ***Achievements:***

- Successfully structured the architecture of a project from scratch in Angular 5, laying the foundation for efficient development.
- Smoothly upgraded the project to Angular 6, leveraging the stable version to ensure optimization and ongoing innovation.
- Conceptualized and executed impactful enhancements to the project's user interface, enhancing user experience and increasing customer satisfaction.

**ITO Software**, Bogota  
*Software factory and outsourcing.*

**August 2017 - February 2018**

### **Full Stack Developer**

Web development and design for the national police inventory and incident reporting application.

#### **Functions:**

- Web development using MVC 5, jQuery, and Ajax to create internal applications.
- Integration of Oracle databases via Entity Framework to ensure efficient and secure data storage.
- Design and implementation of web interfaces using Razor, ensuring an effective and user-friendly experience.

#### **Achievements:**

- Revitalized the existing database model, achieving a more efficient and scalable structure that boosted overall project performance.
- Enhanced interaction with end users, National Police agents, ensuring more effective and seamless communication within the system.
- Acquired robust skills in report generation and data management, successfully addressing tasks related to report creation and administration within the project environment.

## **EDUCATION**

### **C2 EF Standard English Test Certificate.**

EFSET

August 2024

### **Node with React: Fullstack Web Development**

Udemy

May 2023

### **Certified Web Developer: HTML, CSS and JavaScript**

Udemy

October 2021

### **Technology in Systems Analysis and Development**

SENA

February 2015 - October 2017

### **B2 English Certificate.**

DynEd

September 2016
